CHILD CARRIER INSTRUCTIONS

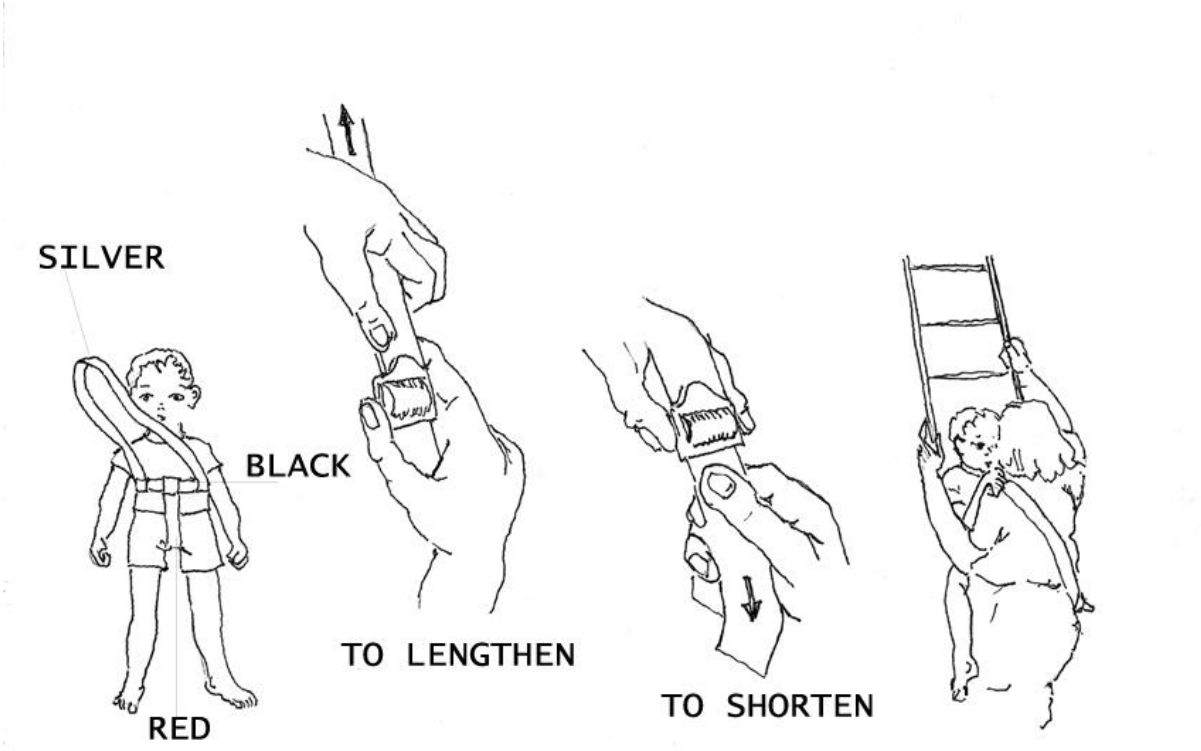
Make sure that everyone who will use this has read the instructions in full before use.

Our child carrier has been specially made to allow any able bodied adult to carry a child in a emergency escape, the carrier will fit any child up to 60lbs or 27kgs

The silver strap is used to place over the head and one shoulder of the adult

The black strap is used for the chest of the child and can be adjusted to fit using images below

The red strap is used to go between the legs of the child and can be adjusted to push the black strap higher to allow the black strap to be close to the armpits of the child.

The child will hold close as if being held and feel supported


We would advise having a dry run with each adult and child so that everyone is comfortable in using the carrier and making any adjustments for better fitting.
