VIGIL FIRE METAL BUCKET WITH LID

The Vigil metal fire bucket with lid is the perfect container for storing fire sand or Flamezorb, which you'll often see on garage forecourts and car parks. Hard to miss thanks to its bright red colour and is clearly labelled 'Fire' on the front, it features a handle for easy transportation and – unlike many others available – is supplied with a lid as standard and not an optional extra.

The original method of extinguishing fire for centuries, you could still fill fire buckets with water, pass along a line and dump on fire. However, these days they're more commonly used to store sand and other absorbent materials which can either be used to clean up a fuel spill, to starve a fire of oxygen or even to stub out cigarette ends. The lid ensures the contents are kept dry so it's always ready to go in an emergency.

Product	Vigil Metal Fire Bucket with Lid
Product Code	VP-EMFB1
H X W X D	270x300x230mm
Weight	1.10kg
Capacity	10-litres
Container Colour	Red
Material	Galvanised Metal
Carton Quantity	6
Carton Dimensions	550x330x330mm
Carton Weight	7.16kg
