ANTI-TAMPER SEALS

Our fire extinguisher anti-tamper seal – now with 10 colours to choose from – is a quick and easy way to show if the extinguisher has been used or tampered with. To use this accessory, just wrap the seal around the safety pin and extinguisher handle (the valve), and then once someone pulls out the pin to use the extinguisher, the seal will snap and cannot then be resealed without a replacement. And don't worry, they're fairly easy to remove so they don't hinder you in an emergency.

As well as fire extinguishers, our anti-tamper seals are used on a wide variety of safety equipment, including first aid kits, spill kits and other security uses for suitcases or where evidence of tampering is required. Provided in packs of 100 or 500, each pull-tie seal is 280mm long. Our extinguisher seals are available in traditional green, yellow, blue, red and orange colours, as well as black, white, purple, pink and grey.

Anti-tamper seals also act as a visible deterrent to anyone who wants to damage your fire extinguishers or property. If the seals are broken, they provide a quick indicator that the fire extinguisher has been tampered with, allowing you to contact your Fire Extinguisher Service Engineer. You should find this seal is replaced annually as part of extinguisher servicing.

Product	Anti Tamper Seals
Product Code	VP-EPTS100
Quantity	100
H x W x D	280x210x20mm
Weight	0.14kg
