FIRE SAND BAG

Fire sand is available in 12.5kg bags, the perfect sized bag for filling up a standard plastic or metal fire bucket to ensure you're prepared for an emergency. Highly effective at extinguishing a small fire by smothering the flames of oxygen, it's also ideal for use on flammable liquid spills, such as petrol or diesel on a forecourt or construction site.

The fire sand provides good coverage for a large area with the benefit of absorbency and fire retardant properties. It's then easy to sweep up after use.
