# HAZARD WARNING BUNTING

Hazard warning bunting provides a highly visible line marker which is often used in construction projects and roadworks to prevent accidents and injuries. 26 metres long with red and white reflective tags, suspended at 100cm intervals, on bright yellow plastic rope. Pendant barrier markers are used to mark out boundaries between pedestrians and vehicles, to cordon off hazards, or to warn of overhead obstacles, with each tag featuring reflective tape which makes these easy to spot even in low-light conditions.

Suitable for use indoors and out, day or night, the hazard warning bunting is best used with steel barrier fencing pins to quickly erect a temporary barrier in a matter of minutes. High strength and reusable, the red and white plastic bunting is manufactured for Vigil Products and is used for demarcation, warning barriers, and overhead line caution bunting.

Product	Hazard Warning Bunting
Product Code	VP-PBM26
H x W x D	30x300x170mm
Weight	0.34kg
Colour	Red and White with Yellow String
Material	Plastic rope / reflective tags
