DOUBLE FIRE HYDRANT STANDPIPES

Our fire hydrant standpipe is made from quality aluminium alloy and is a simple solution to bringing water above ground from a mains underground hydrant. Available with double head to provide two standard UK 2.5" instantaneous outlets onto which you can securely connect multiple layflat fire hoses.

The fire hydrant standpipe itself can connect to a 2.5 inch BSRT outlet on the hydrant using Urban Round Thread (URT) and is only suitable for use during a fire. Supplied with a blank plug and chain to protect outlets from dust and rubbish, the hydrant is manufactured for Vigil Products of durable aluminium.

Standing tall at 930mm, don't forget you'll need a fire hydrant key in order to switch the flow of water on or off.

We also have fire hydrant standpipes separately available that are complete with check valves which are water company approved as they stop water running back through the standpipe once it has passed through.

Product	Double Fire Hydrant Standpipe	Double Fire Hydrant Standpipe with Check Valve
Product Code	VP-FFSPB2	VP-FFSPB2-DCV
H x W x D	120x300x980mm	120x310x950mm
