FIRE HOSE REEL WITH HOSE – MANUAL

Once secured to the wall, the 25mm manual fire hose reel allows to quickly deliver a steadfast stream of water up to 30 metres away once the hose is fully unreeled. Supplied 'Hose On' with a jet/spray fire nozzle already attached too, this arrives ready to install with everything you'll need, including wall brackets, inlet pipe, gate valve and hose roller guide.

A mainstay of firefighting for decades, the Vigil Products 25mm fixed manual fire hose reel is certified to EN 671-1 with LCPB approval, while the fire hose is compliant with EN 694. The perfect choice for large public buildings, factories and warehouses, manual hose reels require you to open the gate valve (like turning on the tap for your garden hose) to allow the flow of water. This is ideal for outside locations which are prone to frost to prevent damage and ensure it remains in good working condition.

Manual fire hose reels should be installed onto a wall to ensure they're ready to go, and are manufactured of UV-resistant powder-coated steel and brass for increased durability. The 25mm fire hose is constructed of tough rubber and PVC blends with a working pressure of 12 bar.

Fixed Hose Reel Contents: Fire Hose Reel, 25mm x 30m Fire Hose, Jet/Spray Fire Hose Nozzle, Wall Brackets, Inlet Pipe, Gate Valve and Hose Roller Guide.
