HOSE PROTECTOR RAMP

Designed for demanding environments like construction sites, warehouses, and industrial facilities, this hose protector ramp offers a dependable solution for safeguarding cables and hoses while keeping workspaces safe. Constructed from industrial-strength rubber, it can withstand loads of up to 20,000kg, providing exceptional durability against heavy machinery and vehicle traffic.

Manufactured for Vigil Products, this fire hose ramp features a dual-channel design that accommodates multiple cables and hoses, preventing damage from compression and abrasion while ensuring smooth operation without interruptions. High-visibility yellow chevron markings make the hose ramp easy to spot, reducing the risk of trips and collisions, even in low-light conditions. Its modular, interlocking system allows seamless expansion, adapting effortlessly to different worksite layouts.

Installation is quick and hassle-free – simply position the ramp over your cables and it’s ready to use. For additional security, it can be bolted down, making it suitable for both temporary and permanent setups. Weather-resistant and flexible enough to conform to asphalt and concrete surfaces, it delivers reliable performance indoors and outdoors.

Designed to enhance safety without slowing down operations, this hose protector ramp is a durable and versatile investment for any high-traffic environment.

Product	Hose Protector Ramp
Product Code	VP-FHPR
H x W x D	860x340x90mm
Weight	13.44kg
Material	Rubber
Colour	Black
Carton Quantity	1
Carton Weight	13.44kg
Carton Dimensions	860x340x90mm
