JET SPRAY NOZZLE PLUS

With the jet spray hose nozzle plus, it's easy to control the spray using the twist function of the rubber bumper so you can change between jet and spray modes, as well as turn the flow of water off and on. Available for 19mm and 25mm fire hoses, it's the perfect replacement for an existing fire hose reel or a brand new installation.

With spinning teeth on the outlet to create different spray patterns, in jet mode the water can reach a distance of up to 12 metres, while the spray function has a reach of 4.5 metres. Manufactured for Vigil Products with a working pressure of 16 bar and tested to 24 bar, it's easy to fit the premium jet spray nozzle, just push it onto the end of the hose. A jubilee clip is required for a secure fit to the hose.

When selecting the size, remember this relates to the internal hose diameter you intend to fit the jet spray nozzle on to. Perfect for use with our range of fire hose tubing for firefighting purposes, or general and industrial use such as wash-down.
