HEAVY-DUTY KERB RAMP

Allowing vehicles to effortlessly mount a kerb, the heavy-duty kerb ramp is easy to deploy and perfect for short use and can be used for any vehicle. 100mm high – the most common kerb height in the UK – it's easily portable with a handy built-in carry handle to take it wherever you go and benefitting from an anti-slip surface too.

Perfect for a variety of needs, these are commonly used for vehicle access, push chairs, wheelchairs, mobility scooters, wheelbarrows, bikes, pallet trucks, forklifts and more, you'll commonly find these at roadworks. With a modular design, these rubber kerb ramps can be used as single ramps or multiple ramps can lock together to create longer ramps.

Measuring 500mm x 300mm, with a height of 100mm, these are manufactured in the UK using recycled rubber whilst still offering impressive strength and durability. The heavy-duty kerb ramps are perfect for industrial, commercial, and personal use.

Product	Heavy Duty Kerb Ramp
Product Code	VP-RKR-B
H x W x D	110x320x500mm
Weight	10.02kg
Colour	Black
Material	Recycled Rubber
Carton Quantity	2
Carton Weight	20.5kg
Carton Dimensions	140x340x530mm
